

SIDDHARTH SHARMA

AI/ML Engineer · LLMs & Agentic Systems · Python, FastAPI & Cloud

siddharth.sharma.8000@gmail.com | +91 98925 07337 | [linkedin.com/in/siddharthsharma8000](https://www.linkedin.com/in/siddharthsharma8000)

PROFESSIONAL SUMMARY

AI/ML Engineer with an MSc in Artificial Intelligence (Heriot-Watt University, Edinburgh) and around four years of combined software and machine learning experience. On a contract ML role I built and evaluated four candidate models for a production classification system, selected the best-performing architecture at 95-98% accuracy, and designed the async data pipelines and FastAPI service layer around it. Earlier experience spans enterprise Salesforce consulting with direct client delivery. Currently focused on agentic AI: LangGraph orchestration, MCP servers, RAG pipelines, and evaluation frameworks.

CORE TECHNICAL SKILLS

Languages: Python (primary), JavaScript, SQL, C#, Java, C++, Apex (Salesforce)

AI / ML: TensorFlow, Scikit-learn, NumPy, OpenCV, Google Mediapipe, CNNs, ANN, Genetic Algorithms

LLMs & Agentic AI: OpenAI API, Anthropic Claude API, prompt engineering (zero-shot, few-shot, chain-of-thought), RAG, LangChain, LangGraph, MCP servers, vector databases (Chroma, FAISS)

Cloud & DevOps: AWS, Docker, Kubernetes, Git, FastAPI, RESTful APIs, CI/CD

Databases: MongoDB, MySQL, Salesforce (SOQL)

Practices: Agile delivery, ML pipelines, model evaluation, technical documentation, OOP, system design

PROFESSIONAL EXPERIENCE

ML Engineer (Contract) · Honest Digital

Jan 2024 – Aug 2025 | Remote

- Built and evaluated four candidate models for a production plant disease classification system in Python (TensorFlow, CNNs, OpenCV); selected the best-performing architecture, achieving 95-98% accuracy across test sets.
- Designed the FastAPI service layer and async MongoDB data pipelines supporting live inference, including schema validation and error handling.
- Contributed to the technical architecture referenced during the company's successful seed funding round.
- Documented model performance baselines, data schemas, and API contracts to support retraining cycles and handover.

Senior Software Engineer · SRKMG Pvt. Ltd.

Sept 2019 – Jun 2021 | Remote

- Digitised a large backlog of unstructured paper records into structured digital formats, making operational data searchable and retrievable for the first time.

Associate Consultant · IRT Digital Analytics Solutions

Jul 2018 – Aug 2019 | On-Site

- Architected and delivered Salesforce CRM solutions for East-West Seeds, improving operational efficiency by 15% through custom Apex and SOQL development.
- Built custom Salesforce prototypes for Zomato and Bira, supporting the sales team in securing new enterprise partnerships.
- Gathered requirements directly from clients and managed the Classic-to-Lightning migration, working across technical and non-technical stakeholders.

Software Developer (Internship) · Appiro, Wipro Technologies

Jun 2017 – Jul 2017 | Hybrid

- Independently designed and delivered a full-lifecycle recruitment platform on Salesforce Sales Cloud as a solo project, connecting job-seekers with recruiters.

KEY PROJECTS

Arion Bright 2.0 – Agentic AI Research Companion

Personal project | 2026

- Rebuilt a 2023 prompt-engineered chatbot as a multi-agent system: LangGraph orchestration with conditional routing, tool-calling ReAct loop, and persistent conversation memory.
- Built a custom MCP (Model Context Protocol) server exposing RAG and calculation tools to external MCP clients including Claude Desktop.
- Implemented a RAG pipeline over a Chroma vector store with source attribution, plus an assertion-based evaluation harness measuring correctness, honesty on empty retrieval, and routing efficiency.

Breast Cancer Detection Model

Heriot-Watt University | Sept – Dec 2022

- Built a configurable multi-layer ANN from scratch in Python (NumPy/TensorFlow); conducted systematic hyperparameter tuning across hidden layers, neuron counts, and learning rates on the UCI Breast Cancer dataset.

Cozmo Robot Demo – Cognitive Assistance

Heriot-Watt University | Sept – Dec 2022

- Integrated OpenCV and Google Mediapipe for real-time object detection; designed an interactive memory game supporting cognitive assessment for elderly users, applying Human-Robot Interaction principles.

EDUCATION

MSc Artificial Intelligence (2:1, Upper Second Class) · Heriot-Watt University, Edinburgh, UK

2022 – 2023

Coursework: AI Agents & Prompt Engineering, Deep Neural Networks, Production ML Systems, Data Mining & Machine Learning, Biologically Inspired Computation, Human-Robot Interaction

BTech Computer Engineering (2:1) · SVKM-NMIMS, MPSTME, Mumbai, India

2014 – 2018
